\* Rated Torque

\*\* Holding Torque

Term	
<b>N. of pole</b>	Areas of a motor where a magnetic pole is generated either by a permanent magnet or by passing current through the coils of a winding.
<b>N. of phase</b>	A group of electrically connected coils.
<b>Rated Voltage</b>	The voltage at which rated torque is generated with the motor at ambient temperature.
<b>Operating Voltage</b>	Describes the range of the permissible supply voltage.
<b>Rated Power</b>	Maximum amount of power that the motor is designed to handle under specific operating conditions without overheating or suffering damage.
<b>Rated Speed</b>	The approximate motor speed at its rated torque point.
<b>Rated Torque</b>	The maximum torque, at rated speed, the motor can produce on a continuous basis, without exceeding the thermal rating of the motor.
<b>Max. Peak Torque</b>	The maximum torque a motor can produce for short periods of time, before irreversible demagnetization of the motor's magnets occurs.
<b>Torque constant</b>	The ratio of a motor's output torque to the motor's input power
<b>Holding Torque</b>	The torque generated by the motor at nominal current.
<b>Rated Current</b>	The approximate amount of current the motor will draw at its rated torque point.
<b>Max. Peak Current</b>	The current drawn by the motor when delivering peak torque
<b>No-Load Current</b>	The current consumption of the motor at rated voltage and under no-load conditions. This value varies proportionally to speed and is influenced by temperature
<b>Current/Phase</b>	The current supplied to the motor phases that will not exceed, at an ambient temperature of 20°C, the thermal limits of the motor.
<b>Resistance/Phase</b>	Winding resistance per phase. Tolerance +/- 12%, steady state.
<b>Inductance/Phase</b>	Winding inductance per phase measured at 1kHz.
<b>Line to Line resistance</b>	This is the phase resistance measured for the completed motor at room temperature. It includes solder, wire and (if present) connector resistances. In motors with very low resistance, the line to line resistance may differ significantly from the internal resistance.
<b>Line to Line Inductance</b>	This is the motor phase inductance measured with an inductance meter at 1000 Hz.
<b>Rotor Inertia</b>	Is the mass moment of inertia of the rotor, based on the axis of rotation.
<b>Back EMF constant</b>	The back (or counter) electromotive force (emf) E is the voltage generated by a running motor that acts to counter the supplied voltage.
<b>Length</b>	Total motor length.
<b>Weight</b>	Total motor mass.
<b>Hall Effect angle</b>	Phase angle at which hall sensors are positioned from each other.
<b>Step Angle</b>	Number of angular degrees the motor moves per full-step.
<b>Step Angle accuracy</b>	The percentage position error per full step, at no load and nominal current. This error is not cumulative between steps.
<b>Shaft run out</b>	Is the geometric tolerance that specifies the run-out fluctuation of a target's feature when the target (part) is rotated on an axis (specified straight line).
<b>Insulation class</b>	The electrical insulation system for wires and other wire-wound electrical components is divided into different classes by temperature and temperature rise. The electrical insulation system is sometimes referred to as insulation class or thermal classification.
<b>Protection Class</b>	IP (or "Ingress Protection") ratings are defined in international standard EN 60529 (British BS EN 60529:1992, European IEC 60509:1989). They are used to define levels of sealing effectiveness of electrical enclosures against intrusion from foreign bodies (tools, dirt etc) and moisture.
<b>Working Temperature</b>	Temperature range allowed for correct operation.
<b>Humidity</b>	Humidity range allowed for correct operation.
<b>Radial Play</b>	The shaft displacement perpendicular to the shaft due to a side force applied perpendicular to the shaft axis.
<b>Axial Play</b>	Axial shaft displacement occurring during a reversal of an axial force on the shaft.
<b>Max. Radial force</b>	Maximum force that can be applied to the shaft in the radial direction (any direction perpendicular to the motor shaft axis).
<b>Max. Axial force</b>	Maximum force that can be applied to the shaft in the axial direction (in the same axis as or parallel to the motor shaft axis).
<b>Dielectric strength</b>	A dielectric test (also known as hipot or high potential test) is performed on all motors under 500V phases to the housing and during 5 seconds after voltage ramp up. Maximum allowed leakage is 1mA
<b>Insulation resistance</b>	The measurement of insulation resistance is carried out by means of a megohmmeter - high resistance range ohmmeter. DC voltage is applied between the windings and the ground of the motor.

# Glossary

## Product families

- BLDC motors with Speed Controller
- BLDC motors with Motion Controller
- Servomotors with Motion Controller
- Stepper motors with Motion Controller

Delta Line's motors with integrated drive and control electronics offer machine builders unprecedented design flexibility due to their compact size, high efficiency, and exceptional reliability. Available as Brushless DC, Servo, and Stepper motors, these advanced motors eliminate the need for separate drives and external controllers, thereby removing the requirement for motor power and feedback cables. This significant reduction in cabling simplifies integration, enhances efficiency, and improves both reliability and electrical noise reduction. As a result, encoder signals remain "clean" and free from electromagnetic interference, providing a complete motor solution in a single, easy-to-integrate device.

The compact integration of the speed controller reduces space requirements and simplifies installation and start-up, opening a wide range of application areas. The integrated electronics facilitate speed control by means of a PID controller. The direction of rotation can be changed via a separate switching input.

### BLDC motor with integrated Speed Controller

Our slotted BLDC motors with integrated controllers combine the compactness of a standard motor with the advanced features of our drives. These motors come equipped with digital inputs and outputs, an analog input, and support for multiple Fieldbus protocols, including CANopen, Modbus RTU, EtherCAT, Modbus TCP/IP, Profinet, Powerlink, and EtherNet/IP. For optimal performance, a fully integrated single-turn magnetic encoder is also available. Additionally, several of our models are IP65 rated as standard, ensuring they can operate reliably in a wide variety of environments.

### BLDC motor with integrated Motion Controller

Our servo motors with integrated controllers are among the most compact on the market. The powerful drive, integrated directly into the motor, reduces cabling and simplifies installation and configuration, thereby improving overall efficiency. These high-performance motors are IP65 rated, STO (Safe Torque Off) certified, and available with an optional integrated brake. All models support a wide range of Fieldbus protocols, including CANopen, Modbus-RTU, Modbus-TCP, EtherCAT, Profinet, EtherNet/IP, and Powerlink.

### Servomotors with integrated Motion Controller

Our stepper motors with integrated electronics use continuous control technology for 65,536 microsteps per revolution and offer encoder options such as magnetic incremental, single-turn absolute, or multi-turn absolute, to meet a wide range of applications. Communication options include CANopen, Modbus RTU, EtherCAT, Modbus TCP/IP, Profinet, Powerlink and EtherNet/IP, allowing the motors to easily connect to any industrial network. Many of our models are IP65 rated, making them suitable for a wide range of environments where moisture or water spray is present.

### Stepper motor with integrated Motion Controller

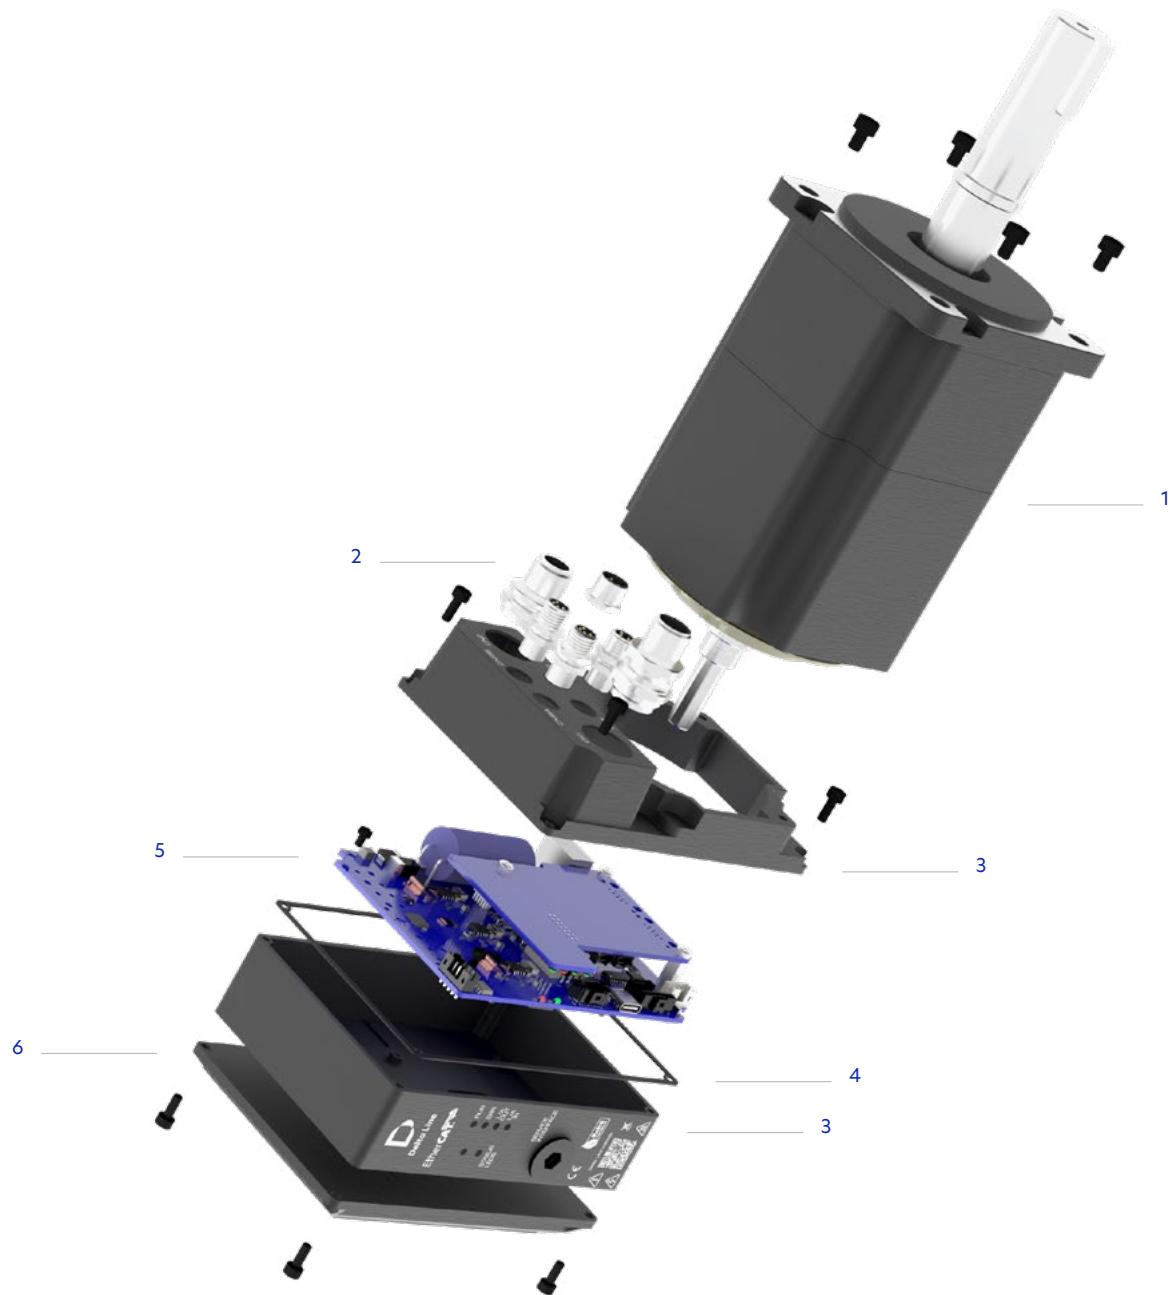

All our motors with Motion Controllers come with two software options: DL Studio and DL Space. DL Studio is a configuration and testing tool that allows users to set all parameters within the drive and control the motor from a PC while monitoring its response, including current, speed, and other data. DL Space includes all the features of DL Studio but also enables users to write custom applications for the drive using a simple, user-friendly programming language. The motor with a Motion Controller can be connected to the PC through a specific interface kit.

Brushless DC motors  
**with Speed controller**

### Advantages at a glance

- Space saving, minimal wiring
- Simple Speed and Direction control
- High torque

The compact integration of the speed controller reduces space requirements and simplifies installation and start-up, opening a wide range of application areas. The integrated electronics facilitate speed control by means of a PID controller. The direction of rotation can be changed via a separate switching input.

Brushless Servo motors  
**with Motion controller**

<b>Advantages at a glance</b>	<b>Brushless Servo motors with Motion Controller</b>	<b>Torque* (Nm)</b>	
Rated Power from 200 to 1000W	IVI060 - IP65	0,64...1,27	26
STO (Safe Torque Off) function	IVI080 - IP65	2,39...3,18	27
IP65 rated and optional integrated brake			

Our servo motors with integrated controllers are among the most compact on the market. The powerful drive, integrated directly into the motor, reduces cabling and simplifies installation and configuration, thereby improving overall efficiency. These high-performance motors are IP65 rated, STO (Safe Torque Off) certified, and available with an optional integrated brake. All models support a wide range of Fieldbus protocols, including CANopen, Modbus-RTU, Modbus-TCP, EtherCAT, Profinet, EtherNet/IP, and Powerlink.

Stepper motors  
**with Motion controller**

## Advantages at a glance

- Compact construction
- Integrated Motion, Speed and Current control
- Parametrization and programming with software

Our stepper motors with integrated electronics use continuous control technology for 65,536 microsteps per revolution and offer encoder options such as magnetic incremental, single-turn absolute, or multi-turn absolute, to meet a wide range of applications. Communication options include CANopen, Modbus RTU, EtherCAT, Modbus TCP/IP, Profinet, Powerlink and EtherNet/IP, allowing the motors to easily connect to any industrial network. Many of our models are IP65 rated, making them suitable for a wide range of environments where moisture or water spray is present.

\_ Coreless

\_ PMDC

\_ Slotted & Slotless

\_ Flat

\_ Frameless

\_ with encoder

**Brushed DC Motors**  
Ø 8-63mm

**Brushless DC Motors**  
Ø 10-115 mm

## Motors

\_ for Stepper motors

\_ for Brushless motors

\_ Speed Controller

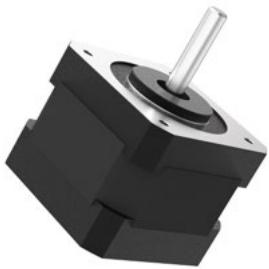

\_ Motion Controller

**Controllers / Drives**  
Phase current 2 to 40A rms

**BLDC, Servo &  
Stepper with Controller**  
Ø 16-80mm / □ 42-86mm

## Electronics

# Our technologies

\_ Medium voltage 220VAC

\_ Low voltage 48VDC

\_ Hybrid

\_ Flat

\_ Hollow shaft

\_ with encoder

\_ External

\_ Captive

\_ Non-Captive

#### Servomotors

□ 38-130mm

#### Stepper Motors

Nema 6-42 Ø 14-110mm

#### Linear Actuators

Nema 8-23

\_ Planetary

\_ Spur

\_ Standard variations

\_ Modular assembly

\_ Full custom

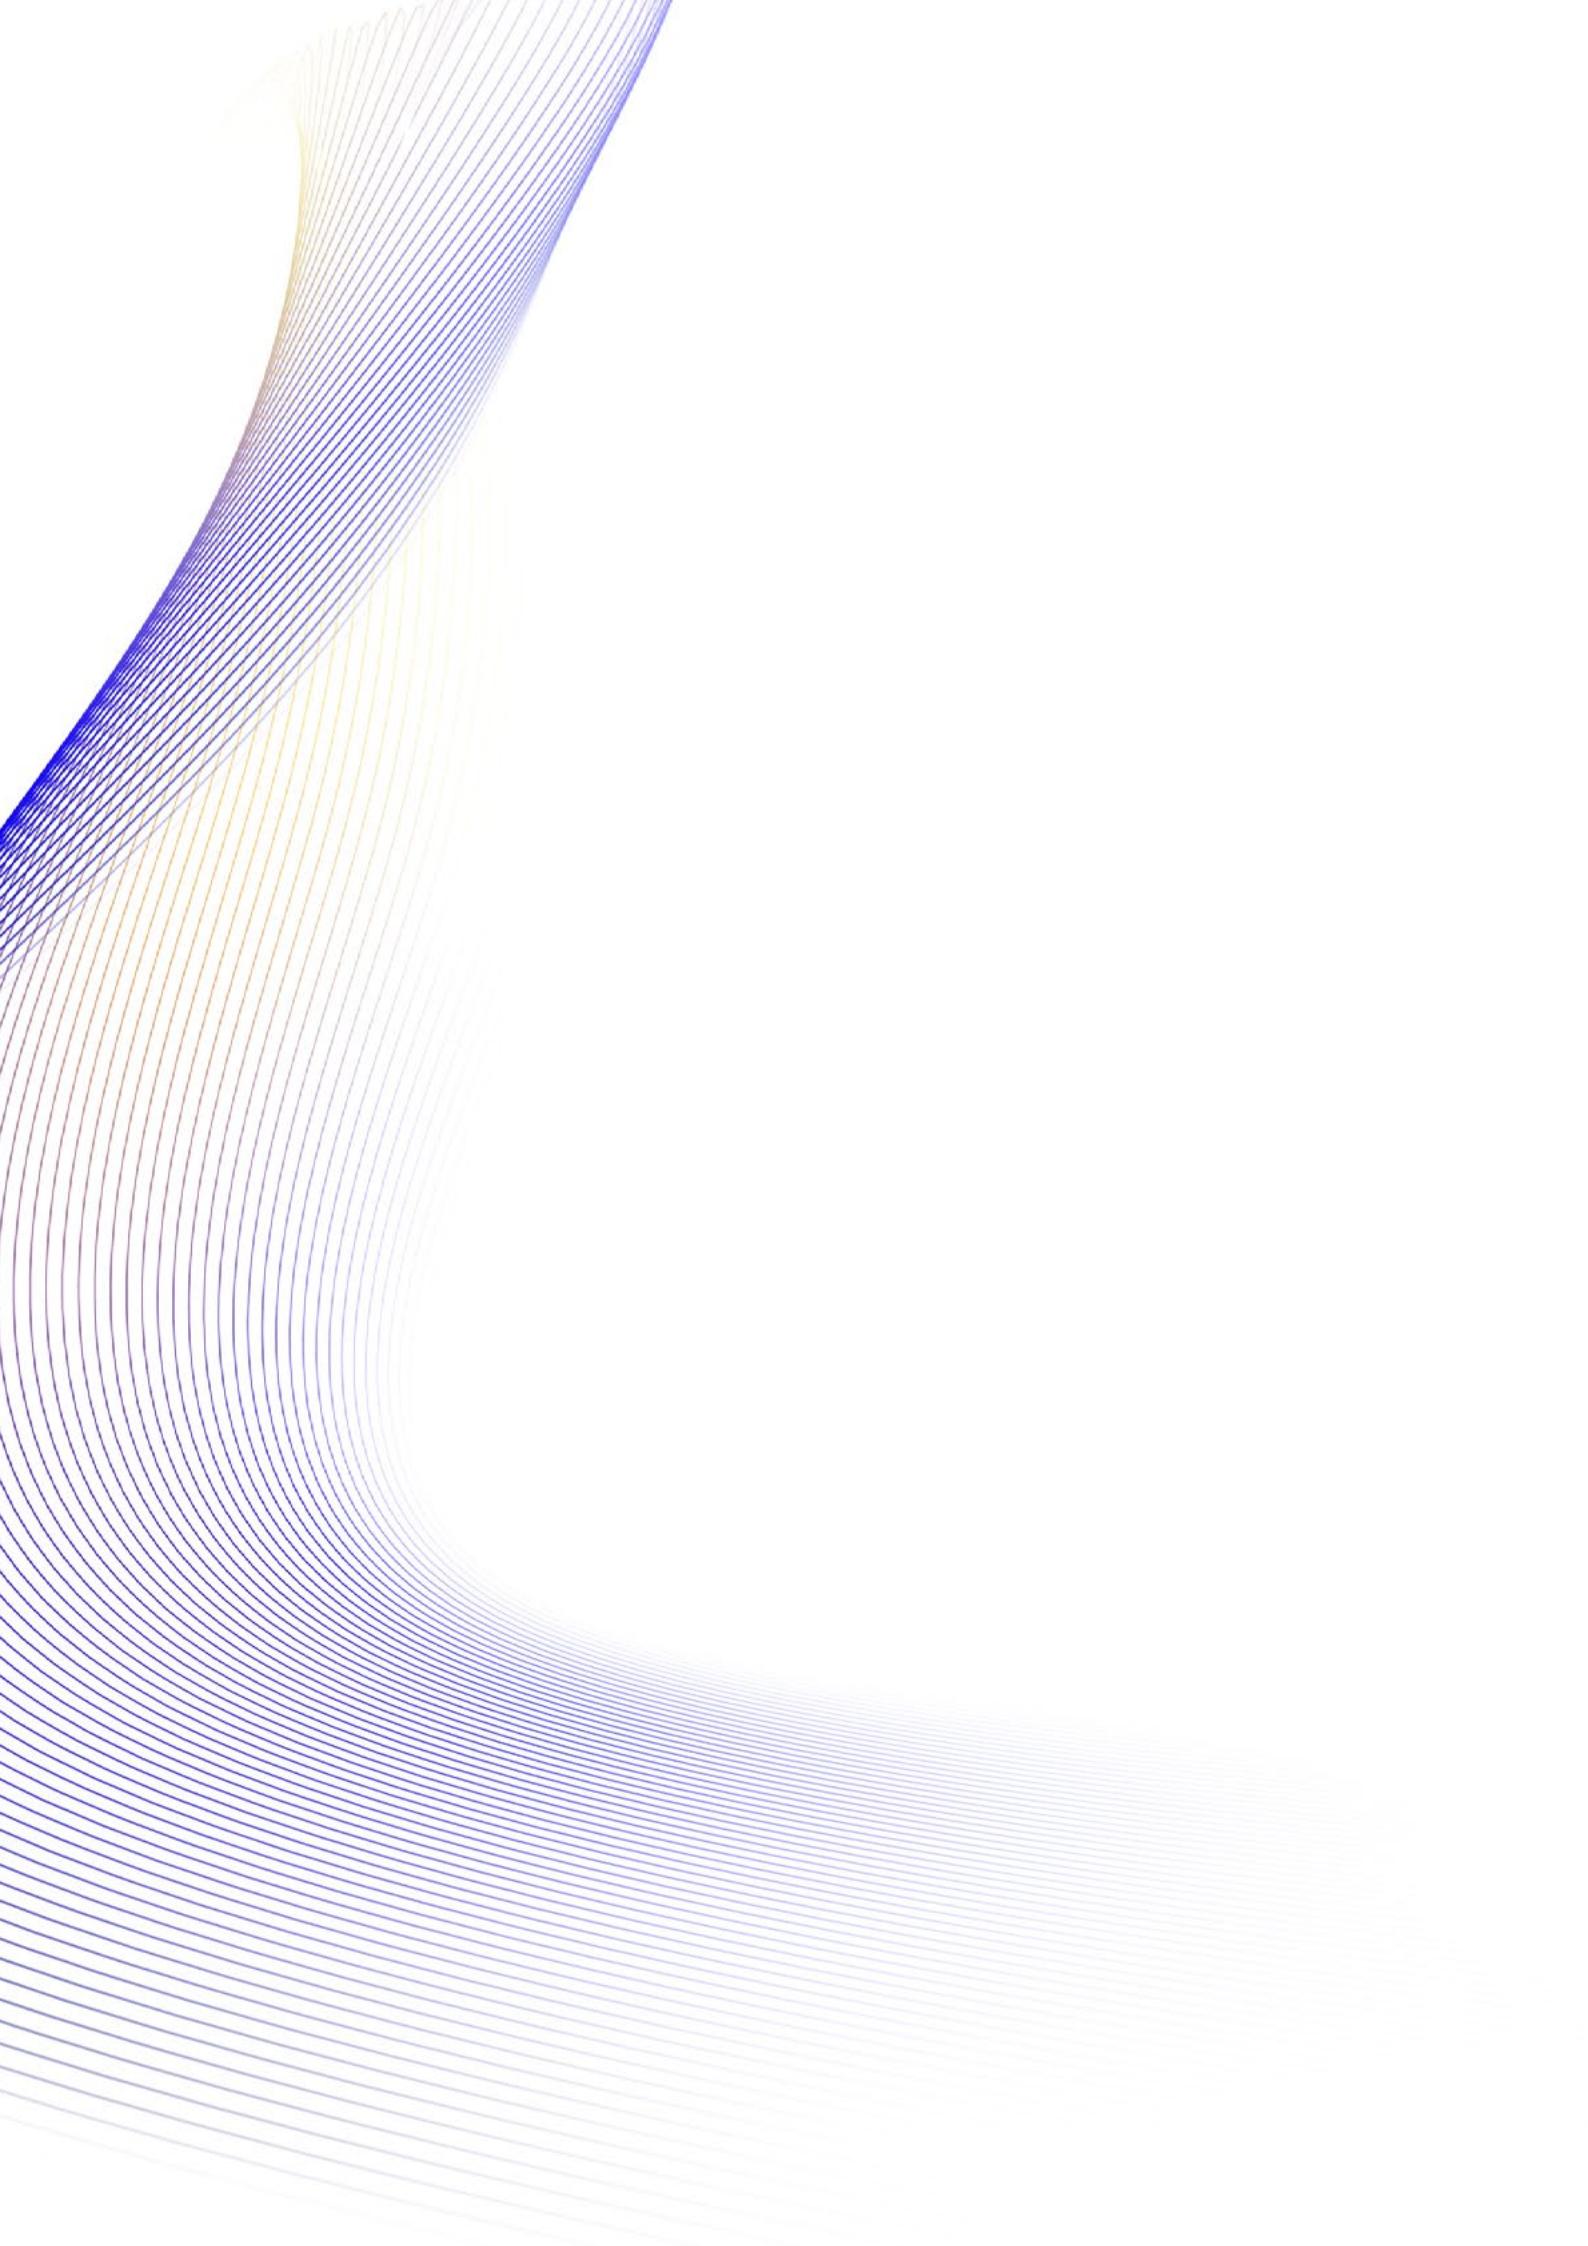

#### Gearboxes

Ø 8-80mm

#### Customizations
